# Revolutionizing Hazelnut Processing: Cutting-Edge Solutions for Food Production and Valorization

### **THE APPLICATION SCOPE / PURPOSE**

For the processing of culinary nuts like hazelnuts into food products, the nuts are cracked open to recuperate the kernel and sometimes the skin. About 50–55% of the weight of the in-shell product is made up of the hazelnut shell, which is primarily used as fuel nowadays. Industries and researchers have focused their efforts on the valorization of the agri-food side streams as ingredients for novel food production, and the possibility of using the complete hazelnut in food production is on the table. Kinematica offers solution for the processing of the in-shelled hazelnuts.
