Improved penetration of active substances over the skin

THE APPLICATION SCOPE / PURPOSE

Active substances or active ingredients are absorbed through the skin in ointments. The penetration rate and quality also depends on the size of the active ingredient. Kinematica offers equipment that enables particles to be reduced to the desired and required size. As active ingredients are often very temperature sensitive, complete temperature control is essential. This can also be realized with Kinematica equipment. The modular systems are adapted to the needs of the customer.
